

Intercontinental Terminals Company (ITC) Fire Morning Update
Deer Park, Texas
March 24, 2019 1200 – March 25, 2019 0400

- The US Environmental Protection Agency (EPA) continues to participate in Unified Command with Texas Commission on Environmental Quality (TCEQ), Harris County Pollution Control Services, and ITC.
- As of March 25, 2019, ITC completed the pumping of Tank 80-15 (Py Gas). ITC continues pumping the residual product/water from Tank 80-7 (Py Gas), as well as the initiation of pumping of Tank 80-10 (Py Gas) and 80-14 (Py Gas).
- ITC continued foaming of the secondary containment and tanks to prevent reignition and reduce emissions continues. A two-foot layer of foam (and one-inch layer of liquid) is being maintained.
- Unified Command developed, reviewed, and approved the Incident Action Plan (#3) for the next operational period.
- Several entities including Harris County, TCEQ, EPA, the 6th Civil Support Team, and ITC continue to conduct air monitoring around the tank farm, in adjoining industrial areas, and communities downwind from the facility.
- The Airborne Spectral Photometric Environmental Collection Technology (ASPECT) aircraft was unable to collect chemical information before 12:00 pm on March 25, 2019, due to cloud cover.
- EPA conducted air sampling using the Trace Atmospheric Gas Analyzer (TAGA) on March 25, 2019. The TAGA analyzed the air samples for benzene, toluene and xylene. The TAGA air sampling results were compared to the TCEQ short-term Air Monitoring Comparison Values (AMCVs) and found no exceedances of the short-term AMCVs for toluene and xylene. The TAGA air sampling results found exceedances of the short-term AMCV for benzene (0.18 ppm). These exceedances of the short-term AMCV for benzene have been shared with unified command and local officials. The TAGA map is not included with this update due to technical difficulties.
- EPA conducted handheld air monitoring from March 25, 2019 (04:00 am) to March 25, 2019 (12:00 am) at XX locations. No results above the detection limit have been observed.
- ITC continued air monitoring on March 25, 2019; there were 2,593 Volatile Organic Compounds readings (110 detects) and 1,885 benzene readings (109 detects) to date. During this reporting period, there were 273 VOCs readings (0 detects) and 222 benzene readings (0 detects). Running down issue will finalize this ASAP
- TCEQ continued handheld air monitoring on March 25, 2019. They reported four detects in this time period.
- On March 25, 2019, the Rapid Assessment Team (RAT) reported minimal impacts to the shoreline except for an area in the Old River. RAT is scheduled to continue visual assessments and documentation along the Bayou shorelines on March 26.
- On March 25, 2019, ITC continues recovery operations at Tucker Bayou.
